See Life Better with cataract surgery designed with you in mind.

It's time to See Life Better...without hindrances, with clarity...with the freedom to go out and live your life – the way you want to live it.

WHAT IS A CATARACT?
A clouding of the eye's natural lens (not a growth, like it's commonly mistaken as) that blocks it from being able to focus light on the retina.

WHAT ARE THE SYMPTOMS?
- Cloudy or blurry vision
- Colors seem faded
- Glare or halos appear around lights and in bright sun
- Double vision
- Frequent prescription changes

HOW ARE CATARACTS TREATED?
Cataracts cannot be treated with medication, diet, eye drops, or a new glasses prescription, and they will not heal on their own. Surgery is the only option.

The good news? Cataract surgery is one of the MOST COMMON and MOST SUCCESSFUL medical procedures in the U.S. today.

The surgeons at Mann Eye Institute are among the most experienced cataract surgeons in the country.
SEE life BETTER WITH LASER CATARACT SURGERY

LASER CATARACT SURGERY
ADDED SAFETY, PRECISION AND CONSISTENCY OF RESULTS

Laser cataract surgery improves the precision of many key surgical steps and customizes the procedure to provide the opportunity for more desirable visual outcomes and potentially make cataract surgery simpler, with fewer complications and faster recovery. It is also capable of treating astigmatism during the procedure.
